

Yago Russo

Full-stack Software Engineer

yagrrusso@gmail.com · 5551986824203

GitHub: <https://github.com/YaGRRusso> · **LinkedIn:** <https://www.linkedin.com/in/yago-russo/>

I work as a Full-stack Software Engineer with a focus on strict end-to-end TypeScript and scalable architectures. I developed the frontend of a platform from scratch using a multi-app monorepo with its own UI library and tooling, and structured the backend in a serverless monorepo on AWS Lambda with more than 17 microservices. I acted as a technical reference for architectural decisions, developer mentoring, and alignment between product and design. With over 5 years of experience, I navigate between various stacks to deliver complex and viable features.

SKILLS

Backend: Node, Nest, GraphQL, Express, Fastify, Prisma, Drizzle, Mongoose, Sequelize, Swagger

Data: MongoDB, MySQL, PostgreSQL, Typesense, DynamoDB, Elastic Search, Gemini

Devops: Docker, Serverless, AWS, Claude, Cursor, EC2, Lambda, Open Router, S3, Storybook

Frontend: React, Next, Tailwind, Tanstack, Radix, Shadcn, Styled Components, Zustand, Astro, DaisyUI

Language: TypeScript, Codegen, CSS, HTML, Javascript, Jest

EXPERIENCE

Full Stack Developer

Droz · Apr 2023 – May 2026

I developed the frontend architecture from scratch by structuring a monorepo for four products and shared libraries using React, TypeScript, Vite, Tailwind, Radix, and i18next. I migrated the legacy system from Next.js to pure React, simplifying the deployment process and reducing operational costs. I built scalable communication microservices integrating APIs with Nest, GraphQL, Mongoose, MongoDB, and DynamoDB. I implemented serverless event orchestration using Lambda and Docker to ensure high system availability. I managed the infrastructure on AWS by configuring S3, Elastic Search, and Typesense for search optimization and continuous monitoring. I also worked on developing automations with n8n and Claude, in addition to mentoring new members of the technical team.

Front End Developer

Aktie Now · Jan 2023 – Mar 2023

I developed responsive and intuitive interfaces for Zendesk Help Center projects focused on large Brazilian clients using HTML, CSS, and JavaScript. I architected and built an internal platform using React, TypeScript, Vue, and Vite to standardize placeholders across client instances. I implemented the tool's styling with Tailwind to ensure visual consistency and interface scalability. I automated the initial configuration of projects through this tool, eliminating the need for manual data entry. I significantly reduced the team's delivery time by optimizing the placeholder implementation workflow. I provided greater operational efficiency in the delivery of Customer Experience solutions by digitizing internal processes.

Junior Front End Developer

Aktie Now · Apr 2022 – Dec 2022

I developed Help Center pages in Zendesk using HTML, CSS, and JavaScript to adapt interfaces to the specific needs of large Brazilian clients. I collaborated with CX teams in mapping support flows to ensure visual consistency and full responsive functionality across multiple devices. I implemented technical customizations that optimized user navigation, resulting in the automation of customer service processes. I improved the digital consumer experience by delivering intuitive interfaces aligned with Aktie Now's digital transformation strategies. I ensured the delivery of high-quality products by integrating front-end architecture with Customer Experience guidelines.

EDUCATION

Systems Analysis and Development

Cesuca · Jan 2023 – Dec 2025

I developed front-end applications using HTML, CSS, JavaScript, TypeScript, Bootstrap, and Tailwind to create responsive interfaces. I implemented robust APIs with Node and managed PostgreSQL and MySQL databases. I used Git and Bash for version control and workflow automation in system development projects.

Computer Technician for Internet

Ifsul · Jan 2017 – Dec 2020

I developed full-stack projects integrating responsive front-ends with React, Bootstrap, and Tailwind with robust back-ends in Java with Spring Boot, Node, and PHP. I implemented RESTful APIs and data persistence using MySQL and PostgreSQL, managing the entire development cycle via Git and Bash. I applied TypeScript, JavaScript, HTML, and CSS to create dynamic and efficient interfaces.

CERTIFICATIONS

ReactJS

B7Web · 96 hours

I completed the ReactJS training at B7Web with a total of 96 hours. I developed scalable frontends using React, TypeScript, JavaScript, Tailwind, and Styled Components, applying hooks and reactivity concepts to build efficient interfaces with Vite and Tanstack.

NodeJS

B7Web · 66 hours

I completed a 66-hour Node training at B7Web, where I developed the technical foundation to create scalable backend APIs. I deepened my knowledge of Node's internal workings, JavaScript, and TypeScript, applying Express concepts to build robust architectures.

Javascript

B7Web · 44 hours

I completed the introductory JavaScript course from B7Web (44 /h), where I learned to develop various projects and, from there, started working as a freelancer, applying the techniques I acquired.

PROJECTS

Fullstack Portfolio Manager with AI (<https://github.com/YaGRRusso/yago-russo>)

I developed a full stack portfolio in React and TypeScript, using Vite, Tailwind, and DaisyUI for the visual layer, and Node/Nest with GraphQL, Mongoose, and MongoDB on the backend. I integrated AI via Open Router to generate personal information from contexts extracted by API, validating the data with Zod and generating types with Codegen. I managed global state with Zustand, containerized the application with Docker, and used Faker for mock data, ensuring an agile and scalable development workflow.

Portfolio (<https://github.com/YaGRRusso/yagrrusso.github.io>)

I developed a portfolio website using Next.js /16 with static export (SSG), ensuring free hosting and instant loading. I integrated skill, project, and experience data via GraphQL Code Generator, strictly typed everything with TypeScript and validated forms with Zod. I implemented bilingual internationalization (en // /pt) using next intl, persisted themes in Zustand, and maintained a consistent UI with Radix UI and shadcn/ui components, all styled with Tailwind CSS /v4. The code was structured with React /19 and custom hooks, guaranteeing advanced SEO, optimized performance, and robust maintainability.

Leaked Cards (<https://github.com/YaGRRusso/leaked-cards>)

I developed "Cartões Vazados," a responsive site built with Astro integrated with React and TypeScript, using DaisyUI for a consistent UI and i18next for internationalization. I created a form that simulates card verification, adding timers and analysis screens to build anticipation before displaying an educational alert about data leakage. The project demonstrates, in an impactful way, persuasion techniques such as authority and social proof, reinforcing digital awareness without storing any entered information.
